

E14

Leadership in Energy and

Environmental Design (LEED) at UCSD

- UCSD is working to improve efficiencies and minimize environmental impact of existing buildings (EB)
- Using the LEED EB point system, project individuals or teams will evaluate an EB to and recommend changes that can be made to improve the building operations
- Reports will include recommendations for building occupants to implement and ranking which may be based upon criteria such as ease of implementation, environmental impact, and cost; recommendations should be justified
